of Fisheries of the NAAS, Kyiv

Purpose. To create a thematic bibliographic list of publications, which highlight the issues of natural and artificial reproduction as well as the harvest of crucian carp in the context of its vulnerability as one of the Red Book fish species in Ukraine, the results of studies of its population, genetic, ecological, physiological, biochemical, immunological and other characteristics.

Methods. Systemic and selective methods were applied in the process of the systematic search. The bibliographic core have been consisted of scientific publications (monographs, conference proceedings, articles from collections of scientific works and periodicals) in mainly Ukrainian and English from the fund of the Institute of Fisheries NAAS Scientific Library, as well as resources available to its users.

Results. There was composed a thematic list of publications with a total quantity of 160 sources covering the time interval from 1975 to 2025, and outlining issues regarding the reproduction, rearing, and harvest of the crucian carp (*Carassius carassius* L., 1758) as one of the species listed in the Red Book of Ukraine with the conservation status of vulnerable; in addition, they include the results of population, morphological, genetic, physiological, biochemical and other studies of crucian carp at various stages of ontogenesis and different living conditions. The literary sources were arranged in alphabetical order by author or title, and described according to DSTU 8302:2015 "Information and documen-

КАРАСЬ ЗОЛОТИЙ (КАРАСЬ ЗВИЧАЙНИЙ) (*CARASSIUS CARASSIUS LINNAEUS*, 1758). ТЕМАТИЧНА БІБЛІОГРАФІЯ

І. Й. Грициняк, library.inst.fish@gmail.com,
ORCID ID 0009-0009-6368-2209, Інститут
рибного господарства НААН, м. Київ

ORCID ID 0000-0003-3808-1320, Інститут
рибного господарства НААН, м. Київ

Мета. Формування допоміжного бібліографічного переліку наукових публікацій, що висвітлюють питання природного та штучного відтворення, а також вилову карася золотого (звичайного) у контексті його вразливості як червонокнижного виду риб в Україні, результати дослідження його популяційних, генетичних, екологічних, фізіолого-біохімічних та інших характеристик.

Методика. Системний пошук у процесі підготовки тематичного переліку ґрунтувався на застосуванні як цілісного, так і вибіркового методів. Бібліографічне ядро складало переважно україно- та англomовні наукові видання (монографії, матеріали конференцій, статті зі збірників наукових праць і періодичних видань) із фонду наукової бібліотеки Інституту рибного господарства НААН, а також ресурсів, доступних її користувачам.

Результати. Підготовлено тематичний бібліографічний перелік публікацій загальною кількістю 160 джерел, що охоплюють часовий проміжок з 1975 по 2025 рр., окреслюючи питання розведення, вирощування й вилову представника риб родини Коропових — золотого (звичайного) карася (*Carassius carassius* L., 1758) — виду, занесеного до Червоної книги України у природоохоронному статусі вразливого; крім того, вони містять результати досліджень популяційних, морфологічних, генетичних, фізіолого-біохімічних та

tation. Bibliographic reference. General principles and rules of composition", with the amendments (code UKND 01.140.40), as well as in accordance with the requirements of APA style — international standard of references.

Practical value. The list may be useful for scientists, specialists, professors, and students whose area of interests includes studies of Red Book fish species, as well as productive, biological, population, genetic, ecological and other characteristics of cyprinids, in particular the crucian carp.

Keywords: crucian carp *Carassius carassius* (Linnaeus, 1758), Red Book fish species, hybridization, breeding, pisciculture, population research, genetic studies, ichthyopathological research, ecological studies.

інших особливостей даного представника іхтіофауни на окремих етапах онтогенезу та за різних умов існування. Літературні джерела розміщені у алфавітному порядку за автором чи назвою, описані згідно з ДСТУ 8302:2015 «Інформація та документація. Бібліографічне посилання. Загальні положення та правила складання», із урахуванням поправок (код УКНД 01.140.40), а також відповідно до вимог оформлення списку літератури за міжнародним стандартом APA style.

Практична значимість. Підготовлений список публікацій може бути корисним науковцям, фахівцям, викладачам, студентам, до сфери інтересів яких належать питання дослідження червонокнижних видів риб, а також рибогосподарських, біологічних, іхтіотоксикологічних, популяційно-генетичних, екологічних характеристик карася золотого (звичайного).

Ключові слова: карась золотий *Carassius carassius* (Linnaeus, 1758), червонокнижний вид риб, гібридизація, розведення, вирощування, популяційно-генетичні дослідження, іхтіопатологічні дослідження, екологічні дослідження.
